Assignment C-4

Aditi Dinesh Mway
T.E. Comp Div: A
Roll no: 02

Title:

Study assignment on process scheduling algorithm in Android & Tizen.

Objectives: 1) To understand Android OS
2) To understand Tizen OS & concept of process management.

Software requirement: Android SDK.

Hardware requirement: M/C Lenovo Think Centre M700 G3,
6100, 6th Gen. H81, 4GB RAM.

Theory Concepts:

Android OS: Android is a mobile O.S. developed by Google, based on a modified version of Linux kernel and other open source software and designed primarily for touchscreen mobile devices such as smartphones & tablets.

Some android versions:

- 1) Gingerboard (2.3)
- 2) Honeycomb (3.0)
- 3) Ice cream sandwich (4.0)
- 4) Jelly Bean (4.3/4.2/4.1)
- 5) Kitkat (4.4)
- 6) Lollipop (5.0)
- 7) Marshmallow (6.0)
- 8) Nougat (7.0)
- 9) Oreo (8.0)

Advantages :

- 1) Support 2D & 3D Graphics.
- 2) Support multiple language.
- 3) Java support.
- 4) Fast web browser.
- 5) Support audio, video etc.

Disadvantages:

- 1) Slow response
- 2) Heat
- 3) Advertisement

Tizen OS: Tizen is a mobile O.S. developed by Samsung that runs on a wide range of Samsung devices, including smartphones, tablets, in vehicle info. devices, smart televisions, smart cameras, smartwatch, Blu-ray players and robotic vacuum cleaners.

Advantages of using Tizen OS.

- 1) It is an open source operating system.
- 2) The OS is compatible with various mobile platform. Application built on Tizen can be launched on iOS & Android too with few changes.
- 3) The Tizen OS is so flexible to offer many applications & adapt too, with little changes.
- 4) Immense personalization capability supported by ARM x86 processor.

Android vs Tizen Operating system :

Process scheduling algorithm in android & Tizen o.s.

1> Normal scheduling

2> Real-time scheduling

3> Thread scheduling

4> Priority based Pre-Emptive Task Scheduling for Android o.s.

5> Dynamic priority pre-emptive scheduling

Conclusion:

Thus, we have studied concept of process scheduling of Android and Tizen o.s.
